1 Overview

This calculator supports basic arithmetic operations and several advanced mathematical functions with an intuitive interface.

2 Calculator Interface

This is what the calculator looks like!

3 Key Steps

1. Enter your expression in the input field (e.g., $2 + 3 * 4$).
2. Click = to compute the result.
3. Results or error messages are displayed below.

4 Function Reference

Basic and Control Functions

- + Addition
- - Subtraction
- * Multiplication
- / Division
- . Decimal Point
- AC Clear All
- DEL Delete Character

Advanced Functions Overview

$\wedge$ Power	Enter the base number then click the $\wedge$ button and enter and the exponent.
$n\sqrt{x}$ Root	Click the $\sqrt{}$ button, enter the degree of the root (e.g., 2 for square root), then the number.
! Factorial	Enter a non-negative integer, then click the ! button.
() Parentheses	Use to group parts of expressions and control the order of operations.
σ Standard Deviation	Click the σ button, enter a series of numbers separated by commas.

5 Function Examples

Function	Example Usage and Notes
Power $\wedge$	$3 \wedge 4 = 81$ Raises 3 to the power of 4.
Root $n\sqrt{x}$	$\sqrt{(2, 4)}$ $\sqrt{(3, 27)} = 3$ $\sqrt{(4, 16)} = 2$
Factorial !	$5! = 120$ Only defined for whole numbers ≥ 0 .
Standard Deviation σ	$\sigma(2, 4, 4, 4, 5, 5, 7, 9) = 2$ Computes population standard deviation.

6 Help Section

The Help section is located in the side panel of the calculator interface. It provides a breakdown of each function, including both basic operations and advanced mathematical features. You can click to expand individual sections to view detailed usage instructions.

7 Tips

- You can use your keyboard to enter numbers and operations quickly.
- Use parentheses for complex expressions.
- Use supported function syntax only.
- Read error messages if results don't appear.

8 Installation and Uninstallation

Installation

To install the calculator application on Linux (Ubuntu):

- Download the installation package: `ivs-calculator_0.1.0_amd64.deb`.
- Double-click the file and choose "**Software Install**" to install the application.

After installation, the calculator can be launched from your system's application menu under the name `ivs-calculator`.

Uninstallation

To remove the calculator application:

- Open the "**Software Install**" application, search for `ivs-calculator`, and click "**Remove**".
